ABOUT ME

As a Mechanical Engineering graduate with a strong passion for technology, I initially pursued a career in the mechanical engineering field but found it less engaging. Since childhood, I have been fascinated by laptops and software-related technologies, which led me to explore a different path. Over the past two years, I have dedicated myself to self-learning web development, focusing on frontend technologies.

Driven by curiosity and a strong desire to transition into the IT sector,

I have immersed myself in **Java+DSA, HTML, CSS, SASS, JavaScript, and React, Tailwind CSS** building personal projects to deepen my understanding of responsive design, UI/UX principles, and frontend development best practices. I am eager to leverage my problem-solving abilities, analytical skills, and hands-on experience to contribute to innovative projects and grow within a dynamic software development environment. With a background in engineering, I bring a methodical approach to coding and a strong aptitude for logical thinking. I am enthusiastic about applying my knowledge to a frontend developer role and making a meaningful impact in the field.

SKILLS

- **Technical --** HTML | CSS | JavaScript | SASS | TailwindCSS | React Js / React Vite | Java(DSA) | Github | Figma | Netlify | Vercel
- **Soft --** Communication | Collaboration | Problem-solving | Adaptability | Timemanagement | Attention to detail | Empathy | Creativity | Leadership.

Music-player

- This music web application looks like the clone of Spotify.
- In this music web application you can play songs which provided locally.
- Albums of 2 - 3 singer songs are present in this application.
- You can play pause the song and can change it by clicking on the songs.

Food-Recipe-App

- You can search the dishes recipe in this as per your need.
- The recipes and ingredients will be provided in details step by step.
- You can also change the theme of the application.

Youtube-Clone

- This is just a youtube clone In which you can watch videos.
- Local youtube API is used to make this so it will provide local indian server videos
- In this frame that use to show the played video is copied from the original youtube for better look

Pokemon Details App

- This is the app in which you can get the details about the Pokemon Cartoon.
- You just have to give the correct name with correct spellings.
- It will Fetch the exact same details from the API and will display on the screen.
